NEW

WSOA & RDD

PART NUMBER	DESCRIPTION
48WSOA	Water/Smoke Overboard Apparatus

The W.S.O.A (Water/Smoke Overboard Apparatus) is the new Navy's De-Smoke/De-Water apparatus that makes use of the DC Deck Overboard for de-smoking and de-watering at the scene rather than having to run ducting to the weather deck. This makes it possible to maintain shipboard integrity during a casualty. The WSOA can also be used to achieve negative space pressure. The WSOA has been used in three actual shipboard casualties and proved to be an invaluable asset.

- To increase the ship's ability to respond quickly and efficiently in the area of toxic atmosphere or de-smoking operations to rid the atmosphere of harmful contaminants without hampering the mission of the ship or daily routine.
- Utilize repair team personnel more effectively in the face of minimum manned ships and equipment.
- Reduce the use of 1-1/2" hoses used to discharge fire main water from the Ram Fan over the side.
- Keep a harmful atmosphere contained in one area vice breaking set boundaries by opening hatches and scuttles possibly introducing contaminants to a space with personnel that are unprotected.
- Maximize the use of repair locker equipment the way it was designed for the removal of contaminated atmospheres.
- Eliminate the clean up of the residual fire main from fire hoses throughout various compartments.
